

- Bullion (CBX) 'the digital precious metal' is a decentralization focused cryptocurrency launched in June of 2013.
- Ideal for storage of wealth (low inflation and low coin supply) while also fulfilling the requirements to be a medium of exchange (divisibility, security, ease of use, mobility and fast transactions).
- Employs an original, first of its kind algorithm, Proof-of-Stake-Participation (PoSP).
- PoSP is a green, energy-efficient alternative to the energy and resource consuming Proof-of-Work (employed in Bitcoin and Ethereum).
- Has a static annual inflation rate of 2% which is **all** used for rewarding Bullion owners who actively participate in the network.
- Owners who do not participate in the network forfeit their potential interest earnings to those who do, thereby allowing for exponentially higher than inflation rate ROI for active participants.

Participation is EASY!

1. Purchase some Bullion (CBX) at an exchange
2. Download the Bullion Vault (<https://bullion.one/>)
3. Send your Bullion to your Vault
4. Password protect your Vault (encrypt)
5. Unlock your Vault, check the 'for staking only' box
6. Leave your Vault running and earn while your Bullion works for you!

For larger investors:

7. *Purchase 2k Bullion at an exchange**
8. *Send Bullion to your downloaded Vault**
9. *Follow Vault instructions for creating and operating a Bullion Participation Node (BPN)**

- ❖ **PoSP = 2-6%** annual interest earnings**
- ❖ **BPN = 6-18%** annual interest earnings***

Chris 'elambert'

- Founder of Bullion

* BPN is in the late coding stages and expected to be complete and made live in July of 2018.

** PoSP earnings projections adjusted to include BPN active network. Pre-BPN ROI is 6-8%.

*** Lowest possible BPN ROI is 6% if all 125 spots are full. If less spots are full, the allotted earnings are shared among active nodes making earnings higher.
